A survey of existing iPhone users suggests only 10% of them are actively planning to buy the new iPhone 13. That might not sound like a lot, but there are 116 million people using iPhones in just the US and a billion active devices globally. The survey comes from the US where a little over 1,000 existing iPhone users were asked if they would definitely upgrade. One in 10 said they would, and if that's true across the world, then Apple doesn't have much to worry about. The same research claims last year that Apple sold 100 million iPhones in the first seven months, which suggests the iPhone 13 may sell the same. Away from the headline, the rest of the research is actually interesting. The biggest percentage of upgrades falls in the 13-24 month time period, when 37% of people said they were going to upgrade. As Savings.com points out, this is likely the people who have 24 month contracts and look to renew their devices after two years, which is a pretty solid amount of time to hold on to a phone. Apple iPhone 13 Pre-Order Information We'll send you pre-order details and the best Apple iPhone 13 deals as soon as they're available. Send me details about other relevant products from T3 and other Future brands. Send me details about other relevant products from third parties. No spam, we promise. You can unsubscribe at any time and we'll never share your details without your permission. Numbers go down when devices are more than 36 months old, with only 11% of people saying they were upgrading – these are all percentages of the 10% who said they were upgrading. That's, perhaps, the most interesting stat. It could be people who are still happy with their old phone, or perhaps they're switching to Android devices. When asked, the respondents said that satellite connectivity was a big motivator, although it seems likely they've perhaps misunderstood what this feature might offer. We've recently covered this, and if it happens it will be emergency use only. Around 27% of people thought this was a feature worthy of upgrading for. Most people, 22%, said they would upgrade for more camera and video features but only 15% cited better battery life. However, battery life was something that those who had no intention of upgrading said was important to them. A decent 20% of them said it would inspire a sale and satellite connectivity was just behind at 17%. So we'll see, if Apple does announce the satellite features it may genuinely boost sales. There's no mention of a 120Hz screen being a big driver. I doubt Savings.com asked people about that, and I honestly doubt the public is that bothered about high refresh rate screens. It is, however, something that seems to bother Android owners who do have 120Hz screens, and can't understand why Apple hasn't done the same. In conclusion then, it sounds like Apple's in for a pretty good year. By this point, it must be good at predicting how many devices it will sell. We do also know that Apple has increased the number of units it ordered, so it must be expecting to sell more once it's actually officially told us what features it will ship with. And as this survey suggests, that could win over people who are currently on the fence. Today's best SIM Only deals Skip to main content Showing 1-8 of 8 answers The Razor Power Core E90 is a great way to power up your ride. With so many electric scooters on the market, it's helpful to take a look at some of the features that make this scooter special. This Scooter is a standout, even by Razor's standards. For starters, it is very affordable when compared to some of its competitors. The main draw to this scooter is that it has a battery that can last up to 60 minutes of continuous use. This gives it twice the range as some of its other Razor counterparts and can make the riding experience much more enjoyable. Rather than having to keep coming back to recharge, you can use the scooter for over an hour on a single charge. Although it lasts a long time, the battery only takes 6-8 hours to charge. The scooter itself weighs about 22 pounds and it can support 120 pounds of weight. It comes with a hand brake for safety as well as polyurethane wheels for smooth and efficient riding. It has a top speed of about 10 miles an hour, which is pretty quick, but also not too fast where it would be dangerous for younger kids. Overall, it has a very attractive design and a ton of cool features. Additional Information for the Razor Electric Scooter E90 The battery life is 50% greater than its predecessor, the original Razor E90. The motor is a high-torque hub motor that carries the scooter up to 10 miles per hour. The frame is durable enough to accommodate larger riders but the scooter is ideally meant for young kids. The motor can be started from the push button throttle. The initial acceleration is fast, but it requires a quick kick-start to get things moving. This kick start can be a useful feature because it lets you have more control over the starting of the electric scooter. Recommendations for the Razor Power Core E90 This scooter is recommended for kids between the ages of 8-16 and it has an upper weight limit of 150 pounds. If you are over 150 pounds you may want to consider getting another electric scooter. Try your best to keep the scooter clean and do not overcharge the battery. If you are assembling the scooter yourself, it is best to follow the owner's manual for proper instructions. Make sure the nuts and bolts of the scooter are tightened sufficiently during assembly. Another thing to be careful of is the charging cycles. Just like with a laptop or cellphone, it is best to charge it full each time and then run it all the way down to keep the battery healthy. Razor Power Core E90 Electric Scooter - Videos Power Core Hub Motor Technology and Design Increased ride time Maintenance free Kick start, high-torque, hub motor Push-button acceleration control Hand-operated front brake Urethane front wheel and TPU rear Retractable kickstand Some assembly required Dimensions: 32.5" L x 16" W x 36" H Max Rider Weight: 120 lbs. For Ages 8 and up Product Weight: 22 lbs. 12V sealed lead acid rechargeable battery Available Colors: Green, Pink Q: Is it enough speed to satisfy a 12 year old? A: I haven't used it yet, but at about 10mph I guess not. Q: My 11 (almost 12) year old is about 59" tall. Would she be too tall for this scooter? A: No. My son is 8 and is this tall and he does fine. Final Verdict So there you have it, the basics of the Razor Power Core E90. It is not too different from the electric scooters you are used to, but there are a few minor details that make this scooter unique. In terms of price range, it is difficult to find an electric scooter of this quality for this price. That being said, if you are looking for an electric. The 90/10 plan offers more menus than most other diets. It provides two weeks' worth of menus for each of the three calorie levels (1,200, 1,400, and 1,600). The lowest-calorie diet plan is for women who exercise little and who have only two to ten pounds to lose and want to lose it fast. The 1,400-calorie plan is for most women with moderately active lifestyles and who have between 2 and 50 pounds to lose. The 1,600-calorie plan works well for most men, whether they exercise or not, and women who are 5'6" or taller. A lengthy list of fun foods that can account for one serving (250 calories) a day is also provided. As long as you don't exceed the serving size specified, just about all of your favorite foods are allowed. The menus are pretty bland compared with a lot of other diet plans, and the amount of food is fairly small. On the 1,400-calorie plan, a typical day might include scrambled tofu and a toasted whole-wheat English muffin for breakfast; pita pizza for lunch; a baked apple for a snack; fish, sweet potato, and green beans for dinner; and a fun food at some point during the day. More recently, Bauer added The 90/10 Weight Loss Cookbook to help users create appetizing menus with over 100 recipes that fit into the various calorie-level diet plans. Fact or Fiction: What the Experts Say The diet is a relatively balanced, low-calorie plan. However, it falls short of the recommended intakes for calcium and vitamin D, and it doesn't provide enough fruits, vegetables, and whole grains each day to meet current recommendations. Experts say that the calories "spent" on the daily allowance of "fun food" would be better spent on more fruits, vegetables, and whole grains. Add a little more produce each day, along with a calcium and vitamin D supplement, and the nutrition would be much improved. Yet, for people who just can't fathom the thought of giving up favorite foods, this plan offers a realistic way to include these foods. The 90/10 plan gets a gold star for its emphasis on physical activity and the flexibility it allows in designing your own activity plan. Gains and Losses/What's the Damage? Bauer promises a weight loss of up to ten pounds during the first two weeks, depending on how much you have to lose and how low you go on calories. After the initial rapid weight loss, you can expect to settle in to a loss of about one to two pounds per week. If you follow the diet for an extended period of time without taking a calcium and vitamin D supplement, you could be putting yourself at risk for osteoporosis. And the lack of high-fiber carbs at the lowest calorie level could cause constipation and increase your risk for other health problems.
